PROFESSIONAL SUMMARY

Software Engineer with **3+ years** of experience building enterprise B2B SaaS products. Skilled in **TypeScript, React, Next.js, and Python**, with expertise in frontend architecture, schema-driven builders, data visualization, performance optimization, real-time WebRTC, and AI-powered interfaces. Strong track record of owning features end to end with modern CI/CD, from architecture to production support, including **34%** faster load times and **83%** faster deployments.

TECHNICAL SKILLS

AI: LLM APIs (Groq, LLaMA), Prompt Engineering, Transformers.js, AI-Assisted Development (Claude, Cursor)
Languages: TypeScript, JavaScript (ES6+), Python, HTML5, CSS3
Frontend: React, Next.js (App Router), Redux Toolkit, Zustand, Tailwind CSS
Data Visualization: ECharts, AG Grid, TanStack Table, Nivo Charts, Pivot Tables
Architecture & Performance: Turborepo, Webpack, Vite, Code Splitting, Tree Shaking, Virtualization, Core Web Vitals
Real-Time: WebRTC (LiveKit), Server-Sent Events, Web Workers
Testing & Observability: Playwright, Jest, React Testing Library, Cypress, Sentry
DevOps & Backend: GitHub Actions (CI/CD), Git, Docker, Node.js, REST APIs

WORK EXPERIENCE

Extraaedge — Software Development Engineer II (Frontend) — August 2023 – Present

Pune, India

- **Data Visualization & Analytics:** Led end-to-end development of the analytics dashboard and no-code Report Builder using **ECharts**, **AG Grid**, **TanStack Table**, and pivot tables, eliminating manual JSON configurations and reducing client report turnaround time by ~**60%**.
- **Application Form Builder:** Architected a schema-driven form engine from scratch, with a builder for admins and a dynamic renderer for applicants supporting conditional logic, multi-step flows, and validations, powering admission forms for **20K+ applicants annually**.
- **CRM Development:** Built core counselor-facing CRM modules, including multi-channel Communications (SMS, Email, WhatsApp, and Calling), a Payment Installment Manager, and advanced lead Filters, streamlining daily counselor workflows and improving counselor efficiency by ~**30%**.
- **Monorepo Consolidation:** Merged the standalone Application Form into the CRM Turborepo, eliminating duplicated Builder and rendering logic while preserving independent builds and deployment targets.
- **CI/CD Optimization:** Optimized multi-stage GitHub Actions pipelines across 5 deployment tiers, cutting deployment time by **83% (30 min to 5 min)**.
- **Frontend Performance Optimization:** Cut a **20 MB+** upfront bundle load (even for login) via route-level code splitting, lazy loading, and tree shaking, reducing initial load time by **34%**; led migration to VirtualSelect across **180+ files**, eliminating production render crashes.
- **Real-Time WebRTC Voice Agent:** Owned frontend implementation of AI voice calling using LiveKit/WebRTC, handling browser media permissions, network interruptions, call lifecycle states, and multi-tab scenarios.
- **Production Reliability & Support:** Owned triage and resolution of **100+** client-reported production issues across three core products (CRM, Application Form, and Widget), diagnosing root causes and delivering fixes within 24–48 hours without regressions.

Crio.Do — Software Development Intern (Full-Stack) — December 2022 – August 2023

Remote, India

- Built React and Node.js apps across e-commerce, video, and travel (QKart, XFlix, QTrip) with REST APIs, token-based auth, debounced search, responsive UIs, and Jest tests.

FEATURED PROJECTS

AI Mock Interviewer — React, TypeScript, Zustand, Groq API (LLaMA 3.1) | Live Demo — 2025

- Built an AI-powered interview preparation platform that generates role-specific questions from job descriptions and streams model responses to the UI using Server-Sent Events (SSE).
- Centralized state in Zustand and batched answer evaluation into a single API call, keeping scoring off the main UI flow.

Client-Side NLP Task Extractor — React, TypeScript, Transformers.js, Web Workers | Live Demo — 2025

- Built an in-browser NLP app with Transformers.js that extracts tasks fully on-device, with no data sent to external APIs.
- Moved model loading and inference to Web Workers, keeping ML off the main thread for a responsive UI.

EDUCATION

Guru Nanak Institute of Technology (GNIT) — 2016 – 2020

Bachelor of Technology (B.Tech) | Hyderabad, India
